Overview

40 years of Rexx; a timeline …
Overview

40 years of Rexx; a timeline …

… or, in reality, 50 years …
Rexx roots go back 50 years…

In 1969 my mathematics teacher at Monkton Combe School, Julian Bewick, taught me to program using a pseudo-assembler (paper-executed) called ‘minlan’; I soon learned FORTRAN IV and wrote an interpreter for minlan …

… and on 28 September 2019 we’ll be celebrating those early days at the school!
Then ... (1970-1974)

• MFC: Pre-University student with IBM (1970)
  – PL/I compiler, compiler for *minlan, etc.*

• BSc Electrical & Electronic Engineering (1974)
  – University of Birmingham
  – Vacation jobs at IBM Hursley and IBM Bristol
  – lots of caving
Then ... (1974-1979)

• IBM Hursley: Test Tools Team (1974–1979)
  – building hardware for testing terminals such as the 3279 ...

The team (December 1978)
(Ron Bowater, Doug Buttmer, Dave Milward, MFC)
Then … (1974-1979)

  - building hardware for testing terminals such as the 3279 …

The team (October 2018)
(Dave Milward, Doug Buttimer, Ron Bowater, MFC, Nick Butler)

… 2019 reunion today!
Microlink

• Used existing coax terminal link (ANR) to attach bipolar microcomputers (such as the 250ns Signetics 8X300) to mainframe

• Software included OS, Compilers, circuit layout …
Own-time projects

• Mostly PL/I and S/360 Assembler
  – Archaeological mapping (1974)
  – Cave surveying programs (1976)
  – Several compilers and interpreters (1976+)

• STET, a STructured Editing Tool (1977)
  – and *lots* of other VM/CMS tools

• Rex (started *20 March 1979*)
  – a biggie: 4,000 hours to 1982
How old was I?

well, 40 years is 40 years …
How old was I? (1979 pix)

After Cueva Toyu — Guinness ceremony
Why Rex?

• CMS had EXEC … a bit like DOS BAT

   &CONTROL OFF
   &IF &INDEX EQ 0 &GOTO -GO
   EXEC DCOPT DROP
   &IF &RETCODE GE 12 &EXIT
   -GO
   &STACK RT …

• EXEC 2: clean design, but just as ugly
  – language committee (Stephenson et al.)
  – hooks for vanilla CMS by Michel Hack
The first Rex programs

• ADDR EXEC … searches nickname file for nickname, displays name and address

• SEND EXEC … send file to a local user

• CONC XEDIT … concatenate & flow macro

• … and lots of testcases
Who used Rex?

• First distributable code was in May 1979; until then, only the one user

• The first real users (pioneers, guinea pigs, trend-setters, …) were
  – Ray Mansell (Hursley, UK)
  – Les Koehler (Raleigh, NC)

  … lots of useful feedback
How did it catch on?

- Internal IBM network, VNET, rapidly growing
- VM Newsletter (Peter Capek)
- Word of mouth, Xmas card …
- Add-ons (Steve Davies’ functions and many others)
Was there a Rex motto?

• Sort of. Pinned to the wall over my desk in Hursley was ...
Was there a Rex motto?

• Sort of. Pinned to the wall over my desk in Hursley was …

Keep the language small

..... < 32 KB!
Why decimal arithmetic?

• One type = characters = decimal
  – avoids many problems (e.g., $0.9/10 = 0.089999996$)
  – see http://speleotrove.com/decimal/decifaq1.html

• Current is third iteration, May—July 1981
  – lots of input from language committee
  – … and from users in 43 countries
  – … and from a noisy ‘no more changes’ lobby
Why are ‘!’ and ‘?’ in symbols?

• I always intended to complete the arithmetic by adding Infinity and NaN

  ! was to be used for Infinity
  ? was to be used for NaN

• Code freeze for product meant these and other changes (e.g., stream I/O) omitted
  – so EXECIO had to be used for files
1981: How did it become ‘official’?

• Internal CMS included XEDIT-editor-based tools, almost all developed using Rex

• Claude Hans in Endicott decided to add Rex even before EXEC 2 shipped; Rick McGuire involved from March 1981

• SHARE talk in 1981 … Ted Johnston (SLAC) asked IBM CEO (Frank Cary) for Rex
1981: A setback...

- IBM PC announced in August
  The very first thread on the new ‘IBMPC FORUM’ was: “who’s writing Rex for the PC?” – many keen volunteers …

- … but a group in San Jose was officially funded to write Rex for PC – so no one else tried; unfortunately they wrote it in Pascal – so the project failed
1982: Why ‘REXX’?

• Trademark search in 1982 found an unrelated product called Rex-80

• Lawyers insisted that ‘X’ be added … … and ‘REXX’ not be used in product name … and acronym was expanded

• Estimated cost of the change: $1,000,000+
1984: Rexx is 5

- Rexx is now public, in VM/CMS, and widely used

- MFC is working on image processing (and writing the Rexx ‘Blue Book’)

- Charles Daney is working on Personal Rexx for the PC
1985: Rexx, Lexx – related?

• Oxford University Press (with IBM) was computerizing the OED (21,000 pages, 60 million words keyed, SGML markup)

  … but they had no good way of editing it

• Hence the Lexx editor for Lexicographers
  – programmable by Rexx macros
boggler

Also bongler, bongler.</vfl>

f. as prec. +

-er</xlem>

One who bungles; a clumsy unskilful worker.

More Answ. Poyson. Bk. Wks. (1557) 1089/1

1986 – 1987

• Lots of new Rexx implementations (MVS, AIX, AS/400, MUSIC, Unix, etc.)

• Rexx added to IBM System Applications Architecture
  – with its own Architecture Review Board, etc.

• Major disagreement over Rexx in OS/2
1988 – 1989

• Object REXX (Oryx) started by Simon Nash and team in Winchester (1988)
  – IBM Endicott involvement (from 1989)
  – (Eventually shipped in 1996)

• IBM Corporate Award ($90,000) for Rexx (1988)

• REXX Compiler for VM/CMS shipped from Vienna (1989, also MVS later)
1990 – 1994

• First Rexx Symposium organized by Cathy Dager et al at SLAC (17 May 1990)

• 20+ Rexx books published 1990–1994 (including *The Rexx Language*, 2nd Ed.)

• SLAC has over 5,000,000 lines of Rexx

• MFC writes PMGlobe and GoServe … customized by Rexx
PMGlobe then ...
... and now
1995: All change

• New IBM Strategy for languages …

… Smalltalk

• Rexx development moved from Endicott to Böblingen (Germany)

• … yet Java was on the horizon …
1995 – 1999

• MFC ports Java to OS/2 (1995), then bootstraps NetRexx with Rexx (1996/7)

• 14 more Rexx books published

• ANSI Rexx (X3.274-1996) published

• Object REXX ships for OS/2, Windows, Linux, and AIX
2000 – 2009

• NetRexx interpreter in 2000 – 2001

• Making Rexx arithmetic “mainstream” in Java, hardware, XML, C, C++, banks, and in IEEE Floating Point Standard 754-2008

• Object Rexx transferred to RexxLA  (2004)

• 50\textsuperscript{th} Rexx book published  (Rexx Programmer's Reference – Howard Fosdick – 2005)
2010 – 2019

- NetRexx transferred to RexxLA (2011)
- IEEE 754-2019 (revision started 2015)
- Open Object Rexx (ooRexx) and NetRexx continue to improve
- RexxLA also now manages the Regina interpreter (classic ANSI Rexx) and BSF4ooRexx (Java binding)
Rexx publications

- 51 Rexx books
- 68 manuals and guides (mostly IBM)
- Many articles and papers

For details, see: http://speleotrove.com/rexxhist/rexxbook.html
Rexx implementations

• Runs on dozens of operating systems
  VM … Unix … Linux … DOS … Windows … Android … Lego Mindstorms …

• 18 IBM products/implementations

• 9 other commercial implementations

For details, see:
http://speleotrove.com/rexxhist/rexxplat.html
Rexx resources

- More history, background information, early programs, documentation, etc. at: http://speleotrove.com/rexxhist/

- Some sample Rexx programs: http://speleotrove.com/rexx/Rexx_code.html

- And, of course, The Rexx Language Association website: http://rexxla.org/
Rexx impact …

• Decimal arithmetic and other Rexx features are increasingly common (in C 202x, Lua, Python, Ruby, and many others)

• Rexx style, goals, and achievements are as important now as they were in 1979
  – readability, simplicity, portability, valuing people time, decimal arithmetic …
  – and everyone here has contributed to that!
Questions?
Backup slides...
Why SIGNAL?

• Early addition to Rex (1979)

• Intended as an exception mechanism (quit from deeply nested programs)
  – but there was no way to propagate it up through CMS calling mechanism (SVC 202)
  – NetRexx uses Java exception mechanism, which works just as originally intended:

    `signal NumberFormatException`
The idea behind parse templates?

- Designed from the ground up, inspired by VM/CMS commands and macros
  
  - ‘SET FONT Times Roman’
    
    **Template**: word1 word2 remainder
  
  - ‘COPY A A A = = B (REPLACE’
    
    **Template**: stuff ‘(‘ options ‘)’
GoServe response time graph
Rexx improvements in NetRexx?

• Most popular: `--` notation for comments

• Keyword `loop` for `do` constructs that loop

• All constructs integrate exceptions (`catch`) and exit code (`finally`), and can be labeled

• Compare is caseless
• Truly keyword-free

• Cleaner stem notation: `bark[ 'pup' ]= 'yap'`
  – consistent with arrays: `array[4]= 'four'`

• Self-defining hex constants: `$2x81 \rightarrow -127$
  – and escapes in string literals

• New `trace var a b c` (Mansell request, 1979!)
Select case:

```pascal
select case i+1
  when 1       then say 'one'
  when 1+1     then say 'two'
  when 3, 4, 5 then say 'many'
end
```

dropped numeric fuzz, stack, commands

function tweaks (e.g., `upper()`, `lower()`)

... more
